Mountain Weather Forecast

Ground Conditions Supplement

Date: Tuesday 5 April. Location: Helvellyn summit at 12:35. Full report: The weekend's thaw has continued. It was plus 3 degrees C, raining and, to be frank, thoroughly miserable on the summit around midday! Last week's snow has now completely disappeared. Neither snow nor ice was encountered on any path up to and including summit level. The only snow remaining on the fells are a few surviving old patches that have been around for months and can be found on steep north and east facing aspects above 900m. As such, they represent no hazard to walkers. The main hazards today were the gusty nature of the wind, low cloud and the wet, slippery nature of the paths and rocks; which is also likely to be the case for Wednesday. Thus exposed, rocky routes, such as Striding and Swirral Edges, require care and thoughtful foot placement. Despite the return to a positive summit temperature, the summit windchill (what the temperature actually feels like) remains well below freezing so for those going onto the fells it remains essential to pack waterproofs, extra warm layers, hat & gloves and equipment - including a map and compass and the ability to use them in potentially poor visibility. At the time of writing, the forecast is for temperatures to drop so with the fells currently very wet there is a possibility that walkers out on the higher fells could encounter ice and possibly fresh snow so do keep up-to-date with the latest forecast and plan routes accordingly. Temperature: plus 2.9 deg C. Maximum wind speed 38.1 mph. Wind chill: -5.5 Deg C. Average wind speed: 26.6 mph.
